

CENG 4391 Introduction to Robotics

Homework 3 Spring 2016

Due February 16, 2016

Dr. T. L. Harman: 281 283-3774 Office D104

Put your name, Student ID, HW number, date, and the Course Number on your homework. Please submit a paper copy at the beginning of class. The assignment should be typed.

Use your own words to introduce the topics. List the references you used for each problem, make a comment as to the contents of the reference, and cite the dates of the articles as best you can.

We are starting to study the Robot Operating System. This is a big undertaking but I will try to simplify it and concentrate on things you need to know.

Do the following:

1. See the robots using ROS
<http://wiki.ros.org/Robots>
2. **Go to our class website and start reading the Turtlesim Guide. We will go over that in class and in the lab.**
