PIC vs Arduino

17,415 views Apr 23, 2020

Difference:

Arduino is for a one-time design - good for learning, etc. (Really a controller)

The Atmel chip company is now owned by Microchip

PIC processors are for production runs

They are supported by IDEs that are powerful

The video discusses the MPLAB X and the Code Configurator (At about 10 min)

There is extensive support from Microchip for product designs and production.
