START LECTURE 11/07/2022 RECORD

Class Rules: 1a_5435_4391_Quiz Results&FutureClasses_10_31_2022.pdf

For CENG 5435_4391 Fall 2022

1. If you scored Below 80 on the Quiz, you will have a Final Exam in class. The exam will cover all the lectures and material from the class.
2. If below 70, you can redo the exam for more points with the conditions:
 - a. Give references for your answers from the class lectures or from data on the websites.
 - b. You must come to D158 and complete some programming assignments.
3. For the others, you can make a report on a ROS robot with a presentation in class. The requirements will be discussed in class.

I strongly suggest that you show up in class for the lectures unless you have a legitimate excuse for being absent.

Cartographer in Foxy

```
harman@harman-VirtualBox:~$ foxy
```

```
harman@harman-VirtualBox:~$ ros2 pkg list |grep cartographer
```

```
    cartographer_ros
```

```
    cartographer_ros_msgs
```

```
    turtlebot3_cartographer
```

<https://automaticaddison.com/how-to-display-the-path-to-a-ros-2-package/>

```
harman@harman-VirtualBox:~$ ros2 pkg prefix turtlebot3_cartographer
```

```
  /home/harman/turtlebot3_ws/install/turtlebot3_cartographer
```

VP Robotics Automation Zebra Technologies Aug 2021 - Present

ROS 2 Cheats Sheet

Command Line Interface

All ROS 2 CLI tools start with the prefix 'ros2' followed by a command, a verb and (possibly) positional/optional arguments.

For any tool, the documentation is accessible with,

```
$ ros2 command --help
```

and similarly for verb documentation,

```
$ ros2 command verb -h
```

Similarly, auto-completion is available for all commands/verbs and most positional/optional arguments. E.g.,

```
$ ros2 command [tab][tab]
```

Some of the examples below rely on:

[ROS 2 demos package](#).

action Allows to manually send a goal and displays debugging information about actions.

Verbs:

```
info      Output information about an action.
list      Output a list of action names.
send_goal Send an action goal.
show     Output the action definition.
```

Examples:

```
$ ros2 action info /fibonacci
$ ros2 action list
$ ros2 action send_goal /fibonacci \
  action_tutorials/action/Fibonacci "order: 5"
$ ros2 action show action_tutorials/action/Fibonacci
```

bag Allows to record/play topics to/from a rosbag.

Verbs:

```
info      Output information of a bag.
play     Play a bag.
record   Record a bag.
```

Examples:

```
$ ros2 info <bag-name>
$ ros2 play <bag-name>
$ ros2 record -a
```

component Various component related verbs.

Verbs:

```
list      Output a list of running containers and components.
load     Load a component into a container node.
standalone Run a component into its own standalone container node.
types    Output a list of components registered in the ament index.
unload   Unload a component from a container node.
```

Examples:

```
$ ros2 component list
$ ros2 component load /ComponentManager \
  composition composition::Talker
$ ros2 component types
$ ros2 component unload /ComponentManager 1
```

daemon Various daemon related verbs.

Verbs:

```
start     Start the daemon if it isn't running.
status    Output the status of the daemon.
stop     Stop the daemon if it is running
```

doctor A tool to check ROS setup and other potential issues such as network, package versions, rmw middleware etc.

Alias: **wtf** (where's the fire).

Arguments:

```
--report/-r      Output report of all checks.
--report-fail/-rf Output report of failed checks only.
--include-warning/-iw Include warnings as failed checks.
```

Examples:

```
$ ros2 doctor
$ ros2 doctor --report
$ ros2 doctor --report-fail
$ ros2 doctor --include-warning
$ ros2 doctor --include-warning --report-fail
```

or similarly,

```
$ ros2 wtf
```

extension_points List extension points.

extensions List extensions.

interface Various ROS interfaces (actions/topics/services)-related verbs. Interface type can be filtered with either of the following option, '--only-actions', '--only-msgs', '--only-srvs'.

Verbs:

```
list      List all interface types available.
package   Output a list of available interface types within one package.
packages Output a list of packages that provide interfaces.
proto     Print the prototype (body) of an interfaces.
show     Output the interface definition.
```

Examples:

```
$ ros2 interface list
$ ros2 interface package std_msgs
$ ros2 interface packages --only-msgs
$ ros2 interface proto example_interfaces/srv/AddTwoInts
$ ros2 interface show geometry_msgs/msg/Pose
```

launch Allows to run a launch file in an arbitrary package without to 'cd' there first.

Usage:

```
$ ros2 launch <package> <launch-file>
```

Example:

```
$ ros2 launch demo_nodes_cpp add_two_ints.launch.py
```

lifecycle Various lifecycle related verbs.

Verbs:

```
get      Get lifecycle state for one or more nodes.
list     Output a list of available transitions.
nodes    Output a list of nodes with lifecycle.
set     Trigger lifecycle state transition.
```

msg (**deprecated**) Displays debugging information about messages.

Verbs:

```
list     Output a list of message types.
package Output a list of message types within a given package.
packages Output a list of packages which contain messages.
show    Output the message definition.
```

Examples:

<pre>\$ ros2 msg packages \$ ros2 msg show geometry_msgs/msg/Pose</pre>	<pre>\$ ros2 pkg prefix std_msgs \$ ros2 pkg xml -t version</pre>	<pre>Verbs: list Output a list of available service types. package Output a list of available service types within one package. packages Output a list of packages which contain services. show Output the service definition.</pre>
<p>multicast Various multicast related verbs.</p> <p>Verbs:</p> <ul style="list-style-type: none"> receive Receive a single UDP multicast packet. send Send a single UDP multicast packet. 	<p>run Allows to run an executable in an arbitrary package without having to 'cd' there first.</p> <p>Usage:</p> <pre>\$ ros2 run <package> <executable></pre> <p>Example:</p> <pre>\$ ros2 run demo_node.cpp talker</pre>	<hr/> <p>test Run a ROS2 launch test.</p>
<p>node Displays debugging information about nodes.</p> <p>Verbs:</p> <ul style="list-style-type: none"> info Output information about a node. list Output a list of available nodes. <p>Examples:</p> <pre>\$ ros2 node info /talker \$ ros2 node list</pre>	<p>security Various security related verbs.</p> <p>Verbs:</p> <ul style="list-style-type: none"> create_key Create key. create_permission Create keystore. generate_artifacts Create permission. list_keys Distribute key. create_keystore Generate keys and permission files from a list of identities and policy files. distribute_key Generate XML policy file from ROS graph data. generate_policy List keys. <p>Examples (see <code>sros2 package</code>):</p> <pre>\$ ros2 security create_key demo_keys /talker \$ ros2 security create_permission demo_keys /talker \ policies/sample_policy.xml \$ ros2 security generate_artifacts \$ ros2 security create_keystore demo_keys</pre>	<hr/> <p>topic A tool for displaying debug information about ROS topics, including publishers, subscribers, publishing rate, and messages.</p> <p>Verbs:</p> <ul style="list-style-type: none"> bw Display bandwidth used by topic. delay Display delay of topic from timestamp in header. echo Output messages of a given topic to screen. find Find topics of a given type type. hz Display publishing rate of topic. info Output information about a given topic. list Output list of active topics. pub Publish data to a topic. type Output topic's type. <p>Examples:</p> <pre>\$ ros2 topic bw /chatter \$ ros2 topic echo /chatter \$ ros2 topic find rcl_interfaces/msg/Log \$ ros2 topic hz /chatter \$ ros2 topic info /chatter \$ ros2 topic list \$ ros2 topic pub /chatter std_msgs/msg/String \ 'data: Hello ROS 2 world' \$ ros2 topic type /rosout</pre>
<p>param Allows to manipulate parameters.</p> <p>Verbs:</p> <ul style="list-style-type: none"> delete Delete parameter. describe Show descriptive information about declared parameters. dump Dump the parameters of a given node in yaml format, either in terminal or in a file. get Get parameter. list Output a list of available parameters. set Set parameter <p>Examples:</p> <pre>\$ ros2 param delete /talker /use_sim_time \$ ros2 param get /talker /use_sim_time \$ ros2 param list \$ ros2 param set /talker /use_sim_time false</pre>	<p>service Allows to manually call a service and displays debugging information about services.</p> <p>Verbs:</p> <ul style="list-style-type: none"> call Call a service. find Output a list of services of a given type. list Output a list of service names. type Output service's type. <p>Examples:</p> <pre>\$ ros2 service call /add_two_ints \ example_interfaces/AddTwoInts "a: 1, b: 2" \$ ros2 service find rcl_interfaces/srv/ListParameters \$ ros2 service list \$ ros2 service type /talker/describe_parameters</pre>	
<p>pkg Create a ros2 package or output package(s)-related information.</p> <p>Verbs:</p> <ul style="list-style-type: none"> create Create a new ROS2 package. executables Output a list of package specific executables. list Output a list of available packages. prefix Output the prefix path of a package. xml Output the information contained in the package xml manifest. <p>Examples:</p>
