

ROSCon22 TurtleBot4

Building one robot in your lab is fun. Building and supporting 10 robots for a classroom is rewarding, but tedious. Building thousands of robots for labs and classrooms around the world is all of that and more. While TurtleBot 4 may look deceptively simple from the outside, it is the culmination of 18 months of hard work, providing the next chapter in the proud history of TurtleBot robots. In this talk, we will take you on the TurtleBot 4 journey from initial concept and business development, through requirements and design, to production and launch, with all the highs and lows that go with it.

Presented by: Adrian Popielas (Clearpath Robotics) and Tony Baltovski (Clearpath Robotics) 18:21
