```
<node name="joint_state_publisher_gui" pkg="joint_state_publisher_gui"
```

```
type="joint_state_publisher_gui" />
```

```

<node name="robot_state_publisher" pkg="robot_state_publisher"
  type="robot_state_publisher" />
<!-- state_publisher changed to robot_state_publisher -->

<node name="rviz" pkg="rviz" type="rviz" args="-d $(find ros_robotics)/urdf.rviz" required="true"
/>
<!-- (required = "true") if rviz dies, entire roslaunch will be killed -->
</launch>

```

(For Noetic – change joint\_state\_publisher to joint\_state\_publisher\_gui -  
change state\_publisher to robot\_state\_publisher

`state_publisher` was a deprecated alias for the node named `robot_state_publisher`. It was removed in [https://github.com/ros/robot\\_state\\_pu...](https://github.com/ros/robot_state_pu...) which is included in the ROS Noetic release of that package. Change `type="state_publisher"` to `type="robot_state_publisher"`

<https://automaticaddison.com/robot-state-publisher-vs-joint-state-publisher/>  
**The Robot State Publisher then takes two main inputs:**

The `sensor_msgs/JointState` messages from the Joint State Publisher.

A model of the robot in [URDF](#) file format.

The **Robot State Publisher** takes that information, outputs the position and orientation of each [coordinate frame of the robot](#), and publishes this data to the [tf2 package](#).

The `tf2` package is responsible for keeping track of the position and orientation of all coordinate frames of a robot over time. At any given time, you can [query the tf2 package](#) to find out the position and orientation of any coordinate frame (i.e. “childframe”) relative to another coordinate frame (i.e. “parent” frame).

## Joint State Publisher: Simulation vs. Real World

When you are creating [robots in simulation using a tool like Gazebo](#), you are going to want to use the [joint state publisher Gazebo plugin](#) to publish the position and orientation of the joints (i.e. publish the `sensor_msgs/JointState` messages).

dd\_robot5 -

[http://wiki.ros.org/joint\\_state\\_publisher](http://wiki.ros.org/joint_state_publisher)  
Noetic

As of early 2020, the GUI functionality has been split out of the main `joint_state_publisher` package into its own package called `joint_state_publisher_gui`.

The old `use_gui` parameter to `joint_state_publisher` is still honored, but launches `joint_state_publisher_gui` if installed and available.

For packages transitioning before this change, `joint_state_publisher_gui` should be added as an `<exec_depend>` to `package.xml` and launch files should be updated to launch `joint_state_publisher_gui` instead of using `joint_state_publisher` with `use_gui` parameter.

## dd\_robot6 with Inertia

## (Noetic and source)
