NOTE For LibreWriter .odt

Size when viewing Cntl+ Wheel

Size if it gets hidden Alt+Space+R Resize .odt

When removing, deleting, cleaning, upgrading, etc **WATCH IT**

MY PHILOSOPHY

DO NOT RUN A TERMINAL COMMAND UNLESS YOU UNDERSTAND EXACTLY WHAT IT WILL DO! THAT IS WHY THE INTERNET IS THERE!

e.g. ASK -"WHAT DOES rm command do?"

-BACKUP BEFORE CHANGING THINGS

KEYBOARD SHORT CUTS USING VIRTUAL BOX MAY REFER TO UBUNTU OR TO THE VBOX ITSELF OR TO THE WINDOWS HOST – WATCH IT!!

(Win (super) + A for example opens win 10 Notifications NOT DASH)

- 3 sudo adduser harman vboxsf
- 4 history

Script

\$ man script (Show options for script – copy keyboard strokes)

All you have to do is to run it: Not so easy to read.

\$ script

Script started, output file is **typescript**

This is especially useful if you want to have a journal for yourself or as a way to document what you did for others.

If you don't like the name typescript or want to save your output file to a specific path, you can do so by supplying a path as the argument. For example: `$ script ~/what_you_did_last_summer.log`

This will record the input you type into your shell and the output you receive, and write both into the *what_you_did_last_summer.log* in your home directory.

```
harman@harman-VirtualBox:~$ script script_6_26_2021.txt
```

```
Script started, file is script_6_26_2021.txt
```

```
harman@harman-VirtualBox:~$ ls

```

MAKE A FILE EXECUTABLE chmod

chmod – Changes the access permissions of one or more files. Only users with permission or ownership of a file can change that file's permissions.

- **chmod 777 filename** gives owner, group and others read, write and execute privileges (+x option does this also)

chmod 755 filename gives owner read, write, execute privileges; group and others get read and execute privileges

\$ gedit NewProgram.py (Create a simple program and then save.)

```
$ ls -la
```

```
drwxrwxr-x 2 tlharmanphd tlharmanphd 4096 Aug 12 16:07 .
drwxr-xr-x 76 tlharmanphd tlharmanphd 4096 Aug 12 15:45 ..
-rw-rw-r-- 1 tlharmanphd tlharmanphd 73 Aug 12 16:00 NewerFile.txt
-rw-rw-r-- 1 tlharmanphd tlharmanphd 69 Aug 12 16:07 NewProgram.py
```

(Note that NewProgram.py is not executable – no x)

```
$ chmod +x NewProgram.py
```

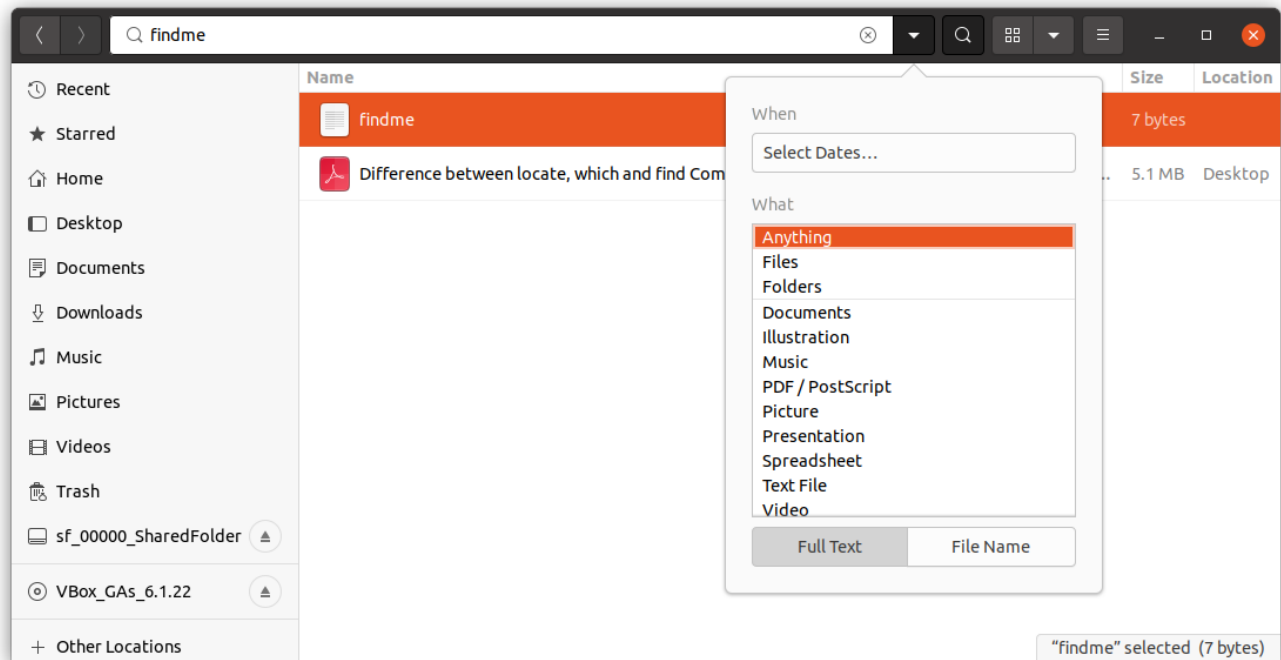

```
$ ls -l
```

```
-rw-rw-r-- 1 tlharmanphd tlharmanphd 73 Aug 12 16:00 NewerFile.txt
```

```
-rwxrwxr-x 1 tlharmanphd tlharmanphd 69 Aug 12 16:07 NewProgram.py
```

(The NewProgram.py is now executable according to the file permissions.)

Find Things & Information GUI, find, locate, whereis

```
harman@harman-VirtualBox:~/Desktop$ find -name "*.txt" (UL PAGE 149)
```

```
./TestOfTextFile.txt
```

locate (Install if needed)

```
sudo apt install mlocate
```

```
harman@harman-VirtualBox:~$ locate findme
```

```
/home/harman/findme
```

\$ whereis eg: \$ apropos whereis whereis (1)- locate the binary, source, and manual page files for a command

\$ whereis synaptic

Snappy Package Manager - UL Page 103, snap

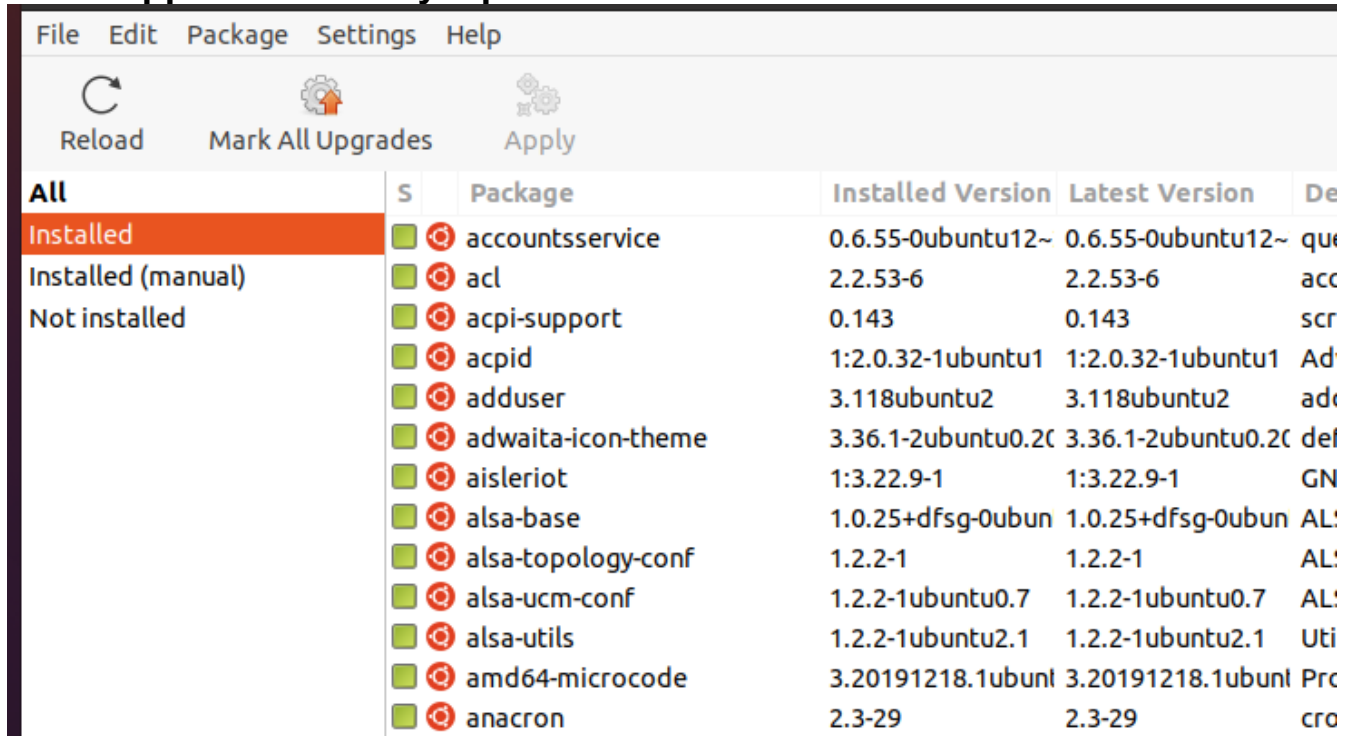

harman@harman-VirtualBox:~\$ snap

The snap command lets you install, configure, refresh and remove snaps.

Snaps are packages that work across many different Linux distributions, enabling secure delivery and operation of the latest apps and utilities.

Usage: snap <command> [<options>...]

Show Applications > Synaptic UL PAGE -94

The screenshot shows the Synaptic Package Manager window. The menu bar includes File, Edit, Package, Settings, and Help. Below the menu bar are three buttons: Reload, Mark All Upgrades, and Apply. The main window is divided into a left sidebar and a main table. The sidebar has a tree view with categories: All, Installed, Installed (manual), and Not installed. The 'Installed' category is selected and highlighted in orange. The main table displays a list of packages with columns for S (Status), Package, Installed Version, Latest Version, and Description. The packages listed are: accountsservice, acl, acpi-support, acpid, adduser, adwaita-icon-theme, aisleriot, alsa-base, alsa-topology-conf, alsa-ucm-conf, alsa-utils, amd64-microcode, and anacron.

All	S	Package	Installed Version	Latest Version	De
Installed	■ ⊗	accountsservice	0.6.55-0ubuntu12~	0.6.55-0ubuntu12~	qu
Installed (manual)	■ ⊗	acl	2.2.53-6	2.2.53-6	acc

FILES GUI

file:///home/harman/Desktop/Files_%202021-06-12%2013-59-18.png

Directory Structure

Directory	Content
bin	Essential command binaries
boot	Static files of the boot loader
dev	Device files
etc	Host-specific system configuration
home	User home directories
lib	Essential shared libraries and kernel modules
media	Contains mount points for replaceable media
mnt	Mount point for mounting a file system temporarily
proc	Virtual directory for system information
root	Home directory for the root user
run	Run-time variable data
sbin	Essential system binaries
sys	Virtual directory for system information
tmp	Temporary files
usr	Secondary hierarchy
var	Variable data
srv	Data for services provided by the system
opt	Add-on application software packages

VARIOUS BASH, ENVIRONMENT, DOT,

A Complete Guide To The Bash Environment Variables

<https://www.shell-tips.com/bash/environment-variables/>

How And When To Use The Dot Command In Bash?

<https://www.shell-tips.com/bash/source-dot-command/>

The **dot command** (**.**), aka *full stop* or *period*, is a command used to evaluate commands in the current execution context. In Bash, the **source** command is synonym to the **dot command** (**.**) and you can also pass parameters to the command, beware, this deviate from the POSIX specification.
