RequisitePro Shell

Create A new Project

- ❑ Open Rational RequisitePro. The **Open Project** dialog box opens. Click the **New** tab.
- ❑ Select the Use-Case Template icon. Note that when you select an icon, a description of that template appears in the text box at the bottom of the dialog box. Click the Details check box to toggle the display of the template description box.
- ❑ Click OK. The **Rational RequisitePro Project Properties** dialog box opens.
- ❑ In the Name box, type "**Name of the Project**". Filling in then **Description** box is optional
- ❑ Click **OK**.

Create a Vision document for your project

- ❑ In the Explorer, expand the **Features and Vision** package, select the **Vision** document, and double-click it to open it.
- ❑ Delete the blue text in Section 5 and the bracketed <aFeature> text in 5.1 and press the Enter key.
- ❑ Select the text below:
 - Using Requite Pro
 - Understand the basic concepts and terminology.
 - Create a new project
 - Create a document
 - Create Requirements
 - Manage Requirements
- ❑ On the browser, click **Edit > Copy**. In the document, click the line below 5.1 and click **Edit > Paste Special**. Select the **Unformatted text** option and click **OK**.
- ❑ Click **RequisitePro > Document > Save**.

Create requirements in a Document

- ❑ In the Explorer, double-click the **Vision** document to open it.
- ❑ Scroll to Sections 5.1 and 5.2. Drag your mouse to select the sentence
Create Requirements
- ❑ Click **RequisitePro > Requirement > New**. The Requirement Properties dialog box opens
- ❑ In the **Requirement Type** list, you select the requirement type to apply to the requirements. Select **Feature Requirement Type**. In the **Name** box, type **New Requirement** and Click **OK**.
- ❑ Click **RequisitePro > Document > Save**.
